Seungmoon Rieh

Senior Software Engineer (AI/ML Platform)

Email: seungmoon.rieh@gmail.com
Mobile: (647) 876-0888

Summary

- Senior Software Engineer with 10+ years of experience building enterprise ML platforms and infrastructure.
- Experienced across the ML lifecycle, from data ingestion and model training to inference and monitoring for classical ML, foundation models, and LLMs.
- Delivered production AI/ML systems emphasizing scalability, reliability, security, and cost efficiency.

Skills

Languages: Python

LLM Infrastructure: Bifrost, OpenRouter, Azure OpenAI, Azure AI Search, Amazon Bedrock

AI/ML Infrastructure: Kubernetes, Ray, Databricks, Unity Catalog

Infrastructure as Code & CI/CD: Terraform, Harness, GitHub Actions, Jenkins

Cloud: GCP (Apigee), AWS (SageMaker), Azure (ADF, ADLS, ACR)

Monitoring & Observability: Splunk, Dynatrace, Datadog, PagerDuty

Experience

Autodesk

Senior Software Engineer (AI/ML Platform) — *October 2026 – Present*

- Developed an agentic control plane to orchestrate AI agents and manage their execution across enterprise workflows.
- Developed an enterprise model gateway to centralize secure, governed access to multiple LLM providers and Autodesk foundation models for internal and external consumers.
- Enabled inference throughput of 600 requests per second (RPS), with end-to-end latency under 1 second.
- Built an ML development and training platform integrating JupyterHub for interactive development, Ray for distributed computing, and Metaflow for workflow orchestration.
- Built vector database and feature store capabilities to support scalable LLM evaluation.

TD Securities

Senior Software Engineer (Data Platform) — *August 2025 – September 2026*

- Built a self-service data engineering platform supporting batch and real-time data ingestion, transformation, and storage across multiple business units.

Layer 6 AI, TD Bank

Software Engineer (ML Platform) — *July 2021 – July 2025*

- Designed and built a distributed ML serving platform comprising a feature store, model registry, and training and inference pipelines, supporting 9 predictive ML use cases in production and delivering an estimated $145M in annual value.
- Automated provisioning and configuration of ML infrastructure, reducing deployment time from weeks to days.
- Reduced costs through enhanced infrastructure monitoring and resource optimization, saving up to $70K in compute costs per use case annually.
- Improved platform security through access controls and vulnerability scanning, achieving zero critical/high vulnerabilities and zero audit findings.
- Oversaw model releases, including testing, deployment, monitoring, and rollback, ensuring reliable promotion of models from development to production.

TD Bank

Senior Software Engineer (DevOps) — *March 2019 – June 2021*

- Accelerated an enterprise DevOps pipeline used by all TD Bank subsidiaries by refactoring code and implementing new features.

TD Bank
Software Engineer (DevOps) *May 2018 – February 2019*

- Developed CI/CD pipelines from scratch to accelerate iteration across projects and deliver a customer-facing mortgage approval system.

TD Bank (FDM Group Contract)
Software Engineer (DevOps) *March 2017 – April 2018*

- Automated releases using scripting and Infrastructure as Code to deliver TD's internal customer records database.

RBC (FDM Group Contract)
Software Developer (JavaScript) *May 2016 – February 2017*

- Developed SharePoint applications for risk reporting, customizing forms with JavaScript (SPServices.js and SP.js) to improve user experience.

FDM Group
IT Trainee (Java) *October 2015 – April 2016*

Education

University of Toronto Toronto, ON
B.A.Sc. in Engineering Science *2015*
