Summary

- Senior Software Engineer with 10+ years of experience building enterprise ML platforms and infrastructure.
- Specializes in ML platform engineering across model development, distributed training, inference, LLM gateways, and production operations, with a focus on scalability, security, reliability, and cost optimization.

Skills

Languages: Python

LLM Infrastructure: Bifrost, OpenRouter, Azure OpenAI, Azure AI Search, Amazon Bedrock

AI/ML Infrastructure: Kubernetes, Ray, Databricks, Unity Catalog

Infrastructure as Code & CI/CD: Terraform, Harness, GitHub Actions, Jenkins

Cloud: GCP (Apigee), AWS (SageMaker), Azure (ADF, ADLS, ACR)

Monitoring & Observability: Splunk, Dynatrace, Datadog, PagerDuty

Experience

Autodesk

Senior Software Engineer (AI/ML Platform) — *October 2026 – Present*

- Developed an agentic control plane to orchestrate AI agents and manage their execution across enterprise workflows.
- Developed an enterprise model gateway to centralize secure, governed access to multiple LLM providers and Autodesk foundation models for internal and external consumers.
- Enabled inference throughput of 600 requests per second (RPS), with end-to-end latency under 1 second.
- Built an ML development and training platform integrating JupyterHub for interactive development, Ray for distributed computing, and Metaflow for workflow orchestration.
- Built vector database and feature store capabilities to support scalable LLM evaluation.

TD Securities

Senior Software Engineer (Data Platform) — *August 2025 – September 2026*

- Built a self-service data engineering platform supporting batch and real-time data ingestion, transformation, and storage across multiple business units.
- Led a team of 5 engineers in standardizing Databricks batch and streaming ingestion patterns, reducing data pipeline onboarding from weeks to days.
- Automated Databricks infrastructure provisioning and governance using Terraform, Unity Catalog, and cloud access controls.

Layer 6 AI, TD Bank

Software Engineer (ML Platform) — *July 2021 – July 2025*

- Designed and built a distributed ML serving platform comprising a feature store, model registry, and training and inference pipelines, supporting 9 production ML use cases associated with an estimated $145M in annual business value.
- Automated ML infrastructure provisioning and configuration, reducing deployment time from weeks to days using Infrastructure as Code and CI/CD.
- Optimized compute utilization through infrastructure monitoring and resource tuning, achieving estimated annual savings of up to $70K per use case.
- Strengthened platform security through access controls and vulnerability scanning, maintaining zero critical/high-severity vulnerabilities and zero audit findings.
- Managed the model release lifecycle, including testing, deployment, monitoring, and rollback, ensuring reliable promotion of models from development to production.

TD Bank

Senior Software Engineer (DevOps) — *March 2019 – June 2021*

– Enhanced an enterprise DevOps pipeline used across TD Bank subsidiaries through code refactoring and feature development.

TD Bank
Software Engineer (DevOps) *May 2018 – February 2019*

– Developed CI/CD pipelines from scratch to accelerate software delivery, including for a customer-facing mortgage approval system

TD Bank (FDM Group Contract)
Software Engineer (DevOps) *March 2017 – April 2018*

– Automated software releases using scripting and Infrastructure as Code for an internal customer records database.

RBC (FDM Group Contract)
Software Developer (JavaScript) *May 2016 – February 2017*

– Developed SharePoint applications for risk data aggregation and risk reporting using JavaScript.

FDM Group
IT Trainee (Java) *October 2015 – April 2016*

Education

University of Toronto Toronto, ON
B.A.Sc. in Engineering Science *2015*
